**Addendum # 1**

**LOI # B06426: Consulting Services for the Renewable Energy Fund**

**Submission Deadline: 6 July 06 @ 1:40 PM (EDT)**

Vendor questions about LOI #B06426, specifically regarding the definition of terms:

On page four of the RFP, it states that specific projects covered by the legislation are: a. Solar, b. Wind, c. Small scale hydropower (less > 100 mw), d. Movement of or the latest heat of the ocean, e. Sustainable biomass, and f. Heat of the earth. I would like to understand your definition of sustainable biomass in this instance, and most specifically if it includes ethanol, biodiesel or anaerobic digesters.

**In the Restructuring Act legislation, which is where the fund gets its money, it does not define it. The fund has always dealt with it on a case by case basis depending how it is generated. In the Renewable Energy Standard regulations, biomass (not sustainable biomass), includes it.**

A handwritten signature in black ink, appearing to read "Jerome D. Moynihan".
